**DETAILED ACTION**

1. This is in response to the Reply filed on 3/13/2009.
2. Claims 1-7, 9-28 are currently pending in this application. Claims 24-28 have been newly added.
3. In view of the prior Office action, the 112 and 102 rejections are maintained below.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-7, 9-28 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Amended claims 1, 9, 10 contain the limitation, “wherein the substrate excludes substrates derived from cellulose”, that has no proper support anywhere in the specification as originally disclosed.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-7, 9-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

8. Claims 1, 9, 10 are indefinite due to the use of “wherein the substrate excludes substrates derived from cellulose”, which is not a positive recitation. Applicants are required to define the substrate to include what it is made of.

***Claim Rejections - 35 USC § 102***

9. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

10. Claims 1-7, 9-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Bruchmann et al. (2004/0024087). The reference is cited in the IDS filed 3/4/2008.

The applied reference has a common Assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Bruchmann discloses a coating on a substrate, the coating comprises a hyperbranched polymer as recited in the presently claimed invention. See text.

Note that Bruchmann discloses the print media including films of polymers and metal foils beside paper, thus reading on the newly added limitation on the substrate. With respect to the surface being modified by the polymer such that it becomes either more hydrophobic or more hydrophilic, it is noted that since the reference teaches the same hyperbranched polymer with the same substrate, the properties of the substrate surface would inherently be the same.

***Response to Arguments***

11. Applicant's arguments filed 3/13/2009 have been fully considered but they are not persuasive.

With respect to Applicants' argument that the instant specification does not require the substrate material to be cellulose, it is noted that the reverse is true. Throughout the specification, paper is repeatedly used as a substrate whose surface comprises the presently claimed hyperbranched polymer. Thus, the substrates in the presently claimed invention do include those derived from cellulose; and the 112 rejections are maintained.

Applicants further argue that Bruchmann does not teach the surface of the substrate to be modified by a hyperbranched polymer to become either hydrophobic or hydrophilic, but rather the reference teaches the use of the hyperbranched polymer to be used in printing ink or lacquers whereas the substrates are print media. It is noted that the claim language is directed to "a substrate whose surface comprises at least one hyperbranched polymer .... said surface being modified by said polymer". Since the lacquer or printing ink containing the hyperbranched polymer in Bruchmann is on the surface of the substrate, the invention of the reference would read on the presently claimed invention.

***Conclusion***

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
